

## ELECTROMAGNETIC LOCK MEX100

This holding magnet is the ideal solution for panic doors. It is typically used as an accessory for holding the door in position. It is not a lock substitute. When permanently connected to power, the magnets hold together firmly and the door cannot be opened. -In case of a power outage, the magnets are disconnected, the door opens, and people can safely escape the building. The MEX100 lock consists of two parts – the powered component is installed on the door frame, while the counter piece is fastened to the door wing.

ORD.N: 11202107

### TECHNICAL PARAMETERS:

Power:	12 V DC
Lock consumption:	250 mA
Holding force:	1800 N
Weight:	1,2 kg

Low power consumption

Electronic protection

Protection against vandalism
